Tour 2. October 1, 2006

Alvarado Wetlands and Savanna

Located just south of Veracruz City, we will visit a variety of habitats of the Alvarado wetland system: tropical savannas, mangroves, various wetlands and tropical dry forest. In addition to enjoying a multitude of migrants from the north, we will be looking for resident bird species specialized to savanna and wetlands.

Midday break at Tlacotalpan along the Papaloapan River.

Target birds: Pinnated Bittern, Lesser Yellow-headed Vulture, Snail Kite, Double-striped Thick-knee, Yellow-bellied Elaenia, Common Tody-Flycatcher, Grassland Yellow-Finch
